

Paper Diffraction Grating Glasses

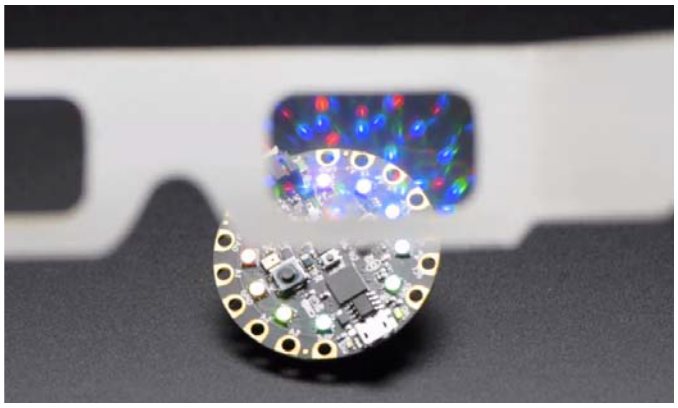

PRODUCT ID: 4387

We're with the squad back at New York's hottest cyberpunk club, *Near Field Commune(ication),* and it's *still* got everything, *Adabot & the Circuit Playground,* Collin's wondrous, mind-blowing, heart-stirring Pulse Room, and more! And you are dressed to the cyber-nine's, with wearable LEDs, EL tape, a full set of glittering RFID/NFC Nail Stickers, and finishing off your ensemble with a pair of Diffraction Glasses.

Works best with point light sources like NeoPixels or individual non-diffused LEDs. It doesn't look as good with diffused LED sources!

These wayfarer glasses, made from durable cardstock, will transform every sparkle, splash, and twinkle of light into a cascade of prismatic delight. When light strikes the diffraction lens it spreads out into a spectrum, producing a rainbow for every single particle of light. Upgrade your experience of fireworks, NeoPixel light show, music festival, EDM party, what have you!
