

Thermochromic Pigment - Orange - 10g

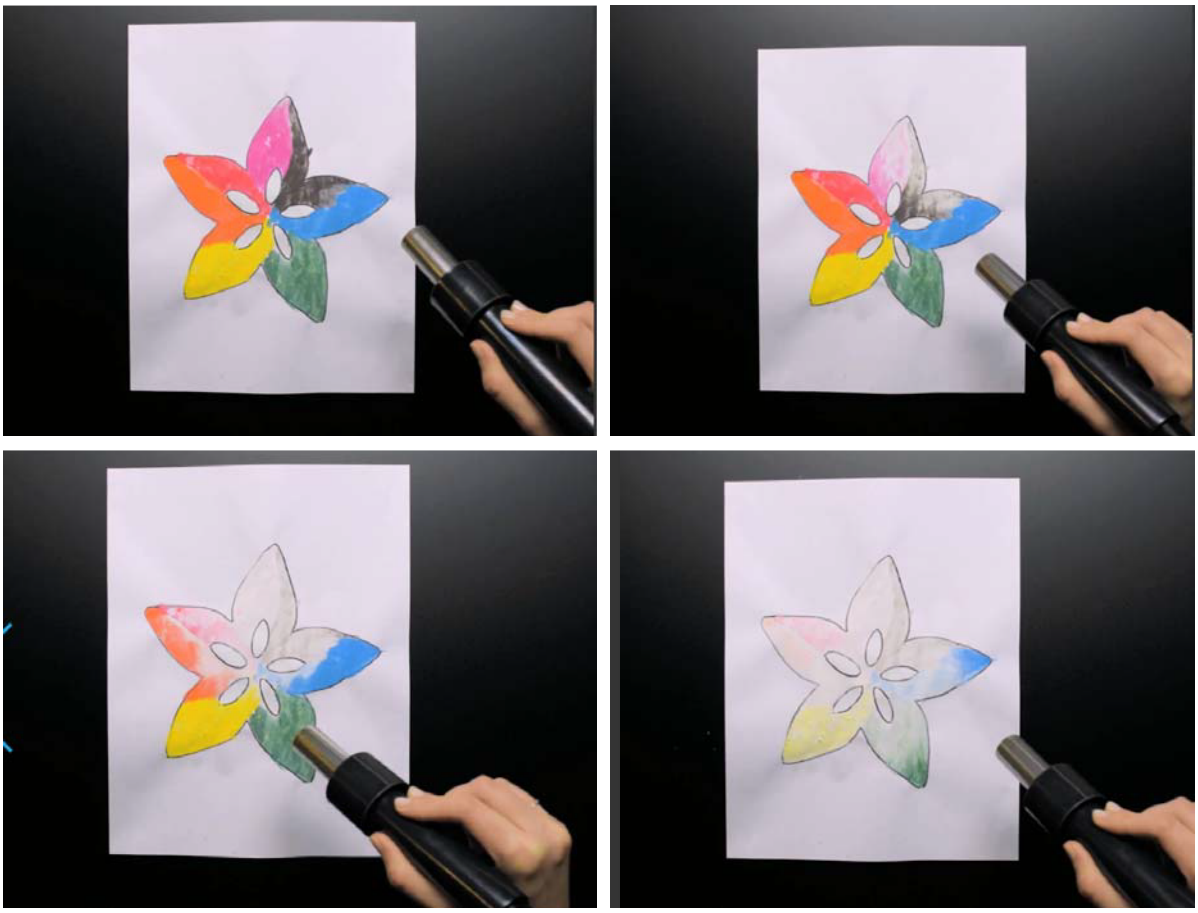

PRODUCT ID: 4136

We love playing with obscure materials that have a creepy-cool or magical quality. Sure, there's invisible ink, but have you ever used *heat* to make a painting disappear?

We're carrying these Thermochromic Pigments in a variety of colors. This pigment is a citrus-y Orange. It changes to a light/white color at 31 °C or 88 °F.

How to get started on your next masterpiece? Just add a little water then paint any surface. This pigment not meant for use on bare skin as a body paint and definitely not for eating! The paint dries quickly at room temperature and can be removed with soap and water. You can also mix into resin, slime, waxes, sugru, hand-formable plastic...pretty much anything you like!

Heat it up with your breath, hot liquids, heater pads or fabric!
